

Periimplantitis-Kit

Long Tungsten Carbide instruments for ideal peri-implantitis treatment

The new MEISINGER Periimplantitis Kit contains eight perfectly matched tungsten carbide finishing burs in egg and flame shape for the ideal peri-implantitis treatment. There are both shapes in two sizes and each in standard and extra fine toothings. The shapes, sizes and toothings of the working parts are perfectly suited for the intraoral treatment of titanium. All finishers have an extra-long FG shank (total length 32 mm) which allows particularly the treatment of difficult to access, deep areas. For the peri-implantitis treatment the finishers are guided around the exposed implant anti-clockwise, so the implant surface is smoothed.

Made in
Germany

At a glance

- Perfectly matched tungsten carbide finishing burs for the effective, intraoral treatment of titanium
- XXL FG shanks facilitate the treatment of difficult to access implants
- Different shapes and sizes for every individual patient case
- Clean and smooth titanium surfaces
